Patriot EZ Loader for CMMG AR15 to 22LR Magazine Notes

CAUTION: The feature that makes these work better than the others, is also a potential weakness. We have done our best to engineer that out of it, but still, it can be an issue. Because of the horseshoe shape of this the legs can break if stressed or bent too far. All plastic parts regardless of composition, are subject to that. So, don't squeeze or pull apart the legs any more than needed to fit onto the magazine. It handles that very easily.

We considered adding extra support to the back of the legs at the bottom but found that would not allow the flexibility needed to easily flex and fit over the magazine and get a tight fit that allows this to work as well as it does.

If you throw this in your range bag, backpack or anywhere that it may be compressed or bent by packing or handling, put the piece of Styrofoam we ship with it between the legs to help keep them from bending too much.

For how to use this see our video at <https://youtu.be/94VHXw4UbyA>

If you have any issues at all, please contact us so we can resolve it to your satisfaction.

If you have any questions, please contact us

Thanks!
